Impact Factor Calculation:

*Unofficial 2011 Impact Factors were established by dividing the number of articles published in 2010 and 2011 to that were cited in 2011 based on a search of the Google Scholar Citation Index database, by the number of articles published in the previous two years (2010 and 2011).

A = the number of times, articles published in 2010 and 2011, were cited by indexed journals during 2011

B = the total number of "citable items" published by that journal in 2010 and 2011.

Impact Factor (IF) = A/B

Your Research- Your Rights

Open Access (OA) is the practice of providing unrestricted access via the Internet to peer-reviewed scholarly journal articles. OA is also increasingly being provided to theses, scholarly monographs and book chapters

Society as a whole benefits from an augmented and expedites research cycle in which research can advance more effectively because researchers have immediate access to all the findings they need.

Increasingly, universities and research libraries are being overwhelmed with information that has been created in digital format and transmitted, accessed via computers. As the number of collections in digital formats exaggerates exponentially, more libraries and information providers are facing a number of unique challenges presented by this relatively new medium.

All works published by OMICS Publishing Group are under the terms of the Creative Commons Attribution License. This permits anyone to copy, allocate, transmit and adapt the work, provided the original work and source is appropriately cited.

The costs of producing open access literature are considered far lower than the costs of toll-access model and many associations, libraries, universities, foundations and individuals today support this mission to endorse open access as a common practice with new and improved financing models.

Revenue

The main reason for researchers not publishing in open access journals, although most of them became aware of that their research field benefits from OA is lack of funding for the article processing charge (APC).

A revenue model for Open Access (university providing funds for the articles written by its faculty) should ideally be created.

Many institutions (such as CERN) and universities (such as MIT, Harvard, Simon Fraser University, Stellenbosch University, Trinity College...) adopt different COPE (Compact for OA publishing equities <http://www.oacompact.org/compact/>) policies that then encourage their researchers to provide open access to their work, green or gold, no later than a year after publication, or that incremented funding may be obtained by researchers to pay open access fees.
